

## Removing Validation Tasks from CareCompass for results that have already been signed or validated

*PowerChart* has the ability to recognise *PowerForms* and *Interactive View* results that have been entered by Students. *PowerChart* will mark these results as needing to be validated. *Pending Validation* tasks will show in *CareCompass* to notify Student Supervisors there are student results requiring validation.

If student results in *Interactive View* have already been validated and this wasn't done via *CareCompass*, *Validation* tasks may still show as due in the *CareCompass Activities* window. To remove these already completed *Validation* tasks from *CareCompass* a different process is required.

## Removing Validation tasks from CareCompass when Student Results have already been validated

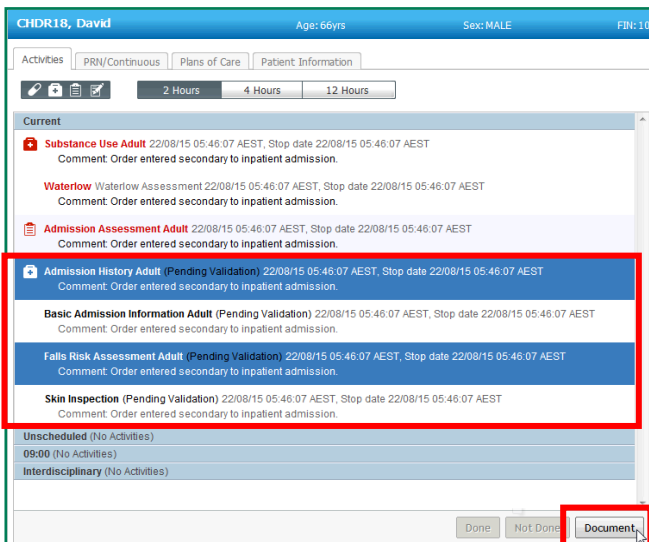

1. In *CareCompass* click on the due tasks in the *Activities* column

2. Tasks or activities requiring validation will display in black text with *Pending Validation* displayed in brackets

**Skin Inspection (Pending Validation)** 22/08/15 05:46:07 AEST, Stop date 22/08/15 05:46:07 AEST  
Comment: Order entered secondary to inpatient admission.

3. Select the relevant tasks/activities to validate then click *Document*

*Interactive View* will open to the *Activity View Band*.

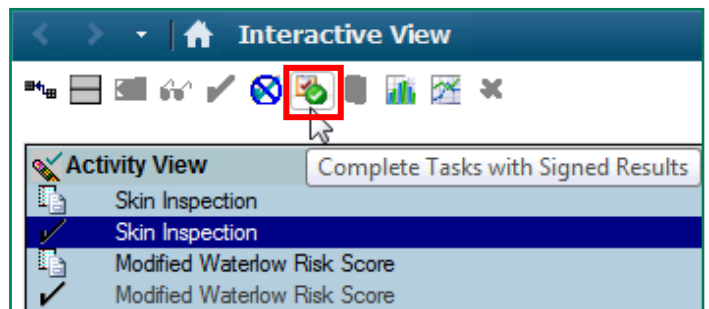

4. If student results have already been validated/signed/authenticated the *Authenticate* button  will be greyed out

5. Instead click the *Complete Tasks with Signed Results* button 

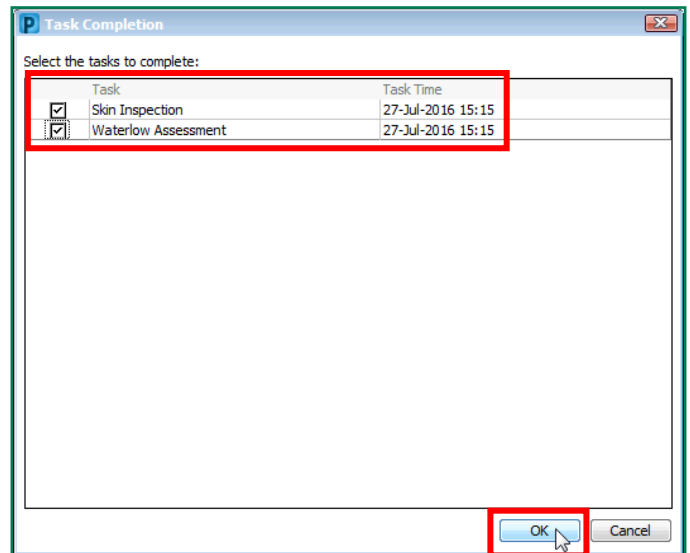

This button will only appear if you access *Interactive View* to validate already validated/signed results via *CareCompass*. It will not show if you access *Interactive View* directly.

The *Task Completion* window will open.

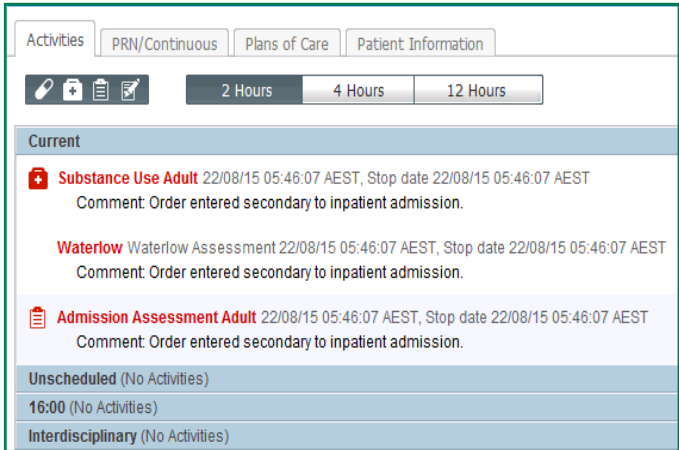

6. Select the results that have already been validated/signed/authenticated then click *OK*

7. The sections in *Activity View* will display an icon indicating those activities have been completed

The *Validation* tasks will no longer be showing as due in *CareCompass*.

### Removing Validation tasks from CareCompass when the Complete Tasks with Signed Results button isn't available

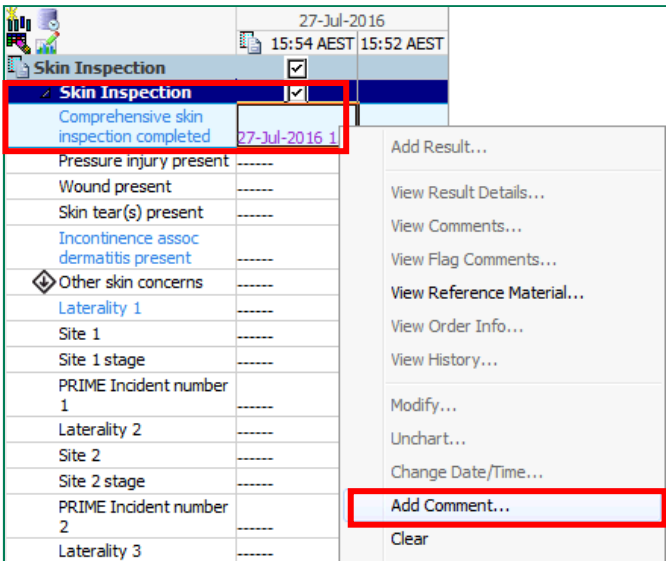

These steps should only be followed when the appropriate *Complete Tasks with Signed Results* button is not available, and, time permits.

The results have already been validated/signed/authenticated, this step is just to remove the *Pending Validation* task notification from *CareCompass*.

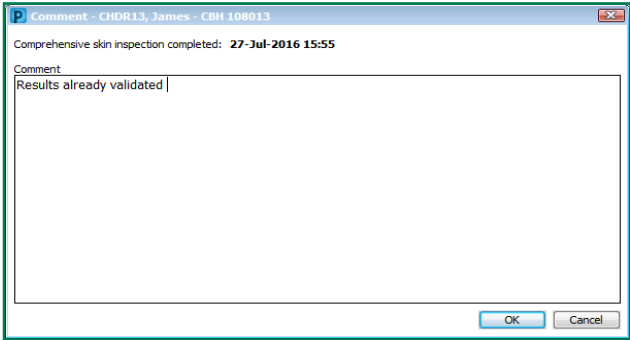

1. Follow steps one to four above
2. If the *Complete Tasks* button is not available click on the first *Section* to be completed in the *Activity View Band*

3. Enter a value into that *Section* then right-click on it and select *Add Comment*

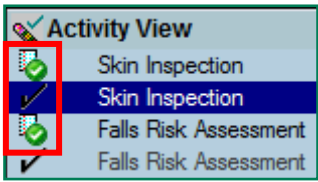

4. Enter a comment such as 'Result already validated' then click *OK*

5. Repeat steps two to four to validate multiple sections
6. *Sign* off your results by clicking the *Sign* button

7. The sections in *Activity View* will display an icon indicating those activities have been completed

8. Exit the Patient's chart

The *Validation* tasks will no longer be showing as due in *CareCompass*
