

Intra Operative Pathology Orders

Perform Surgical Procedure

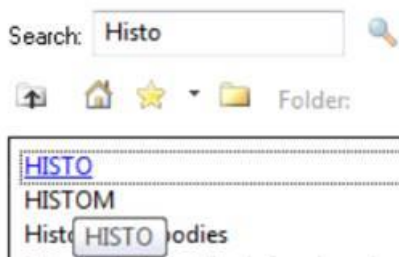

- Collect specimens and label them –business usual

Placing Histopathology Orders (including Frozen Sections)

- At the end of the procedure, place the orders for pathology testing in PowerChart.
- Click on **+Add** in the Orders tab

- Search for **HISTO** and click on test to add it to the **test checkout** (one **HISTO** order can placed for any number of specimens).

Click **Done** to enter the **Orders Details** form

Highlight the pathology order(s) and complete the order details, including:

- Collection Priority to be left as = **URGENT**
- Reason for order/detail: (clinically relevant notes).
- Contact phone/page: (especially for frozen sections).
- Ensure to leave Collected as = **YES**
- Clinician collect should remain as = **YES**

When more than one specimen is collected for a histology order, record all details for each specimen in the **Order Comments** tab.

- Ensure that the specimen numbers listed in order comments correlate with specimen containers.
- Specimen details must be written left to right in a single line without hitting the enter key.
- Separate each specimen with a **#** i.e. #1/10 Large Bowel #2/10 Small Bowel

You can now sign the order and the labels will print.

Intra-operative Microbiology Orders

If microbiology is required, the orderables are Tissue Culture M/C/S or Intra Operative or Invasive Specimens Culture M/C/S. A separate order needs to be places for each site that microbiology is to be performed on.
