

Selecting a Different Administration Time – example Maternity IBUPROFEN Ordering

When selecting an order sentence to prescribe ibuprofen there are several sentences to choose from.

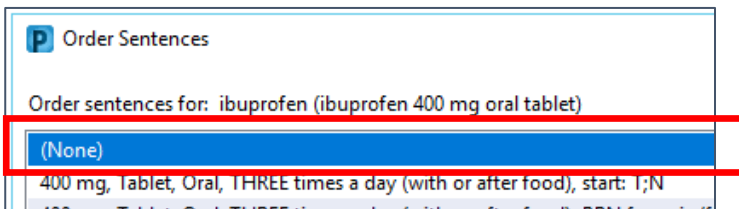

The pre-filled order sentence has default times of: **0800, 1200, 1800**

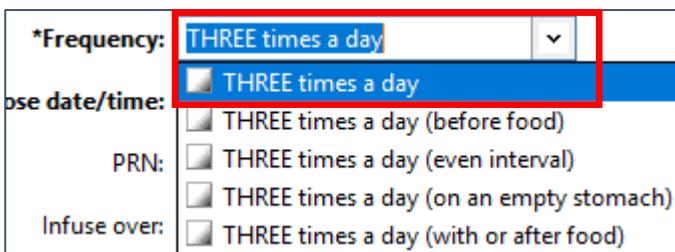

If different administration times are required, this can be done by editing the time in the frequency section. Another way is to choose the “drug only” with no order sentence,

Select a “blank”(None) order sentence

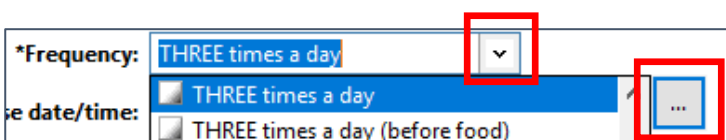

Fill in the required fields. Choose the frequency required – in this example **THREE times a day**

All of these orders have pre-selected administration times.

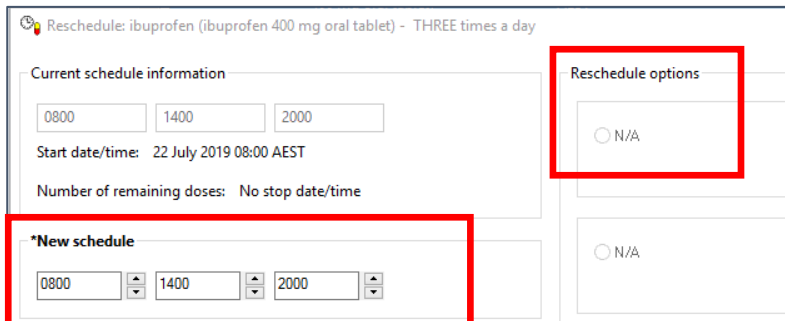

To check the scheduled times, select the down arrow in the frequency box and open the ellipses

Selecting a Different Administration Time – example Maternity IBUPROFEN Ordering

This will open up the scheduled administration times.

Check if the times are correct, if not, edit in the new schedule section, then select the reschedule option for when to commence on the right.
